Installing Eudora for Mac OS X

After you have downloaded the compressed Eudora installation archive, find the file "**Eudora52XSite.hqx**" and double click it.
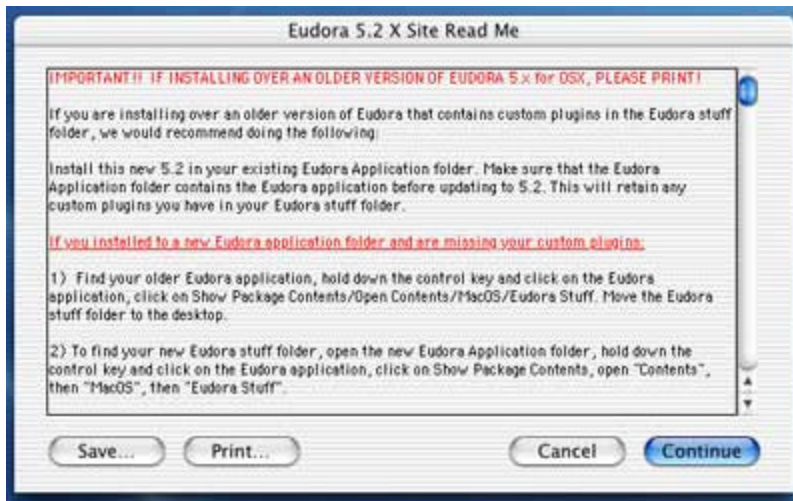

By double clicking the file, you have decompressed the archive and extracted the necessary installation file.

Double click the installation file, "**Eudora 5.2 X Site**" now.

The Eudora splash screen will appear. Please click **Continue**.

Eudora warns you if you're installing this version over an old version of Eudora

This tutorial assumes you are not upgrading. If you are, please follow the directions given.
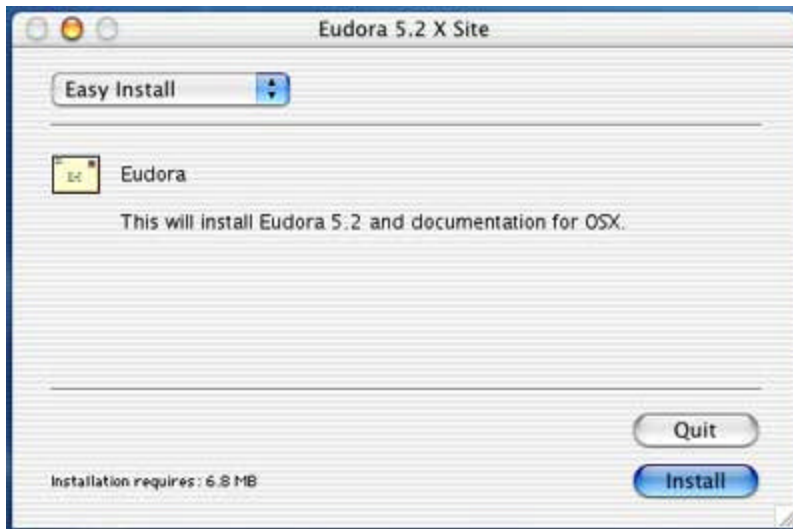

Click **Continue** when ready.

You will be presented with the user license. Please click **Continue**.

Select the drop-down box that says Custom Install and choose **Easy Install**..
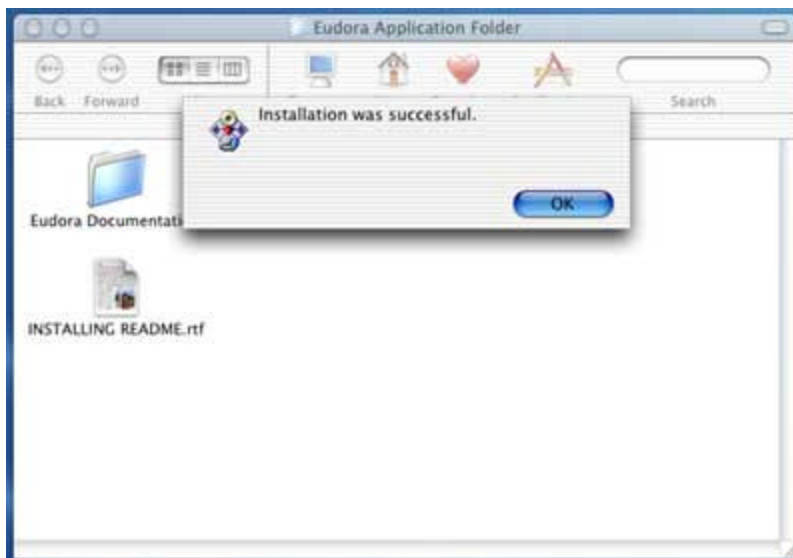

Please click **Install** when ready to continue.

Choose the folder in which you wish to install the software. We recommend you leave the default setting.

Click **Choose**.

The installation program will install Eudora on your computer.

When installation is complete, you will be notified. Click **OK** to finish.
